

Amito ¼ racks in Telehouse

Telehouse North, East, West and North2

Telehouse Docklands – the leading network colocation ecosystem

Telehouse North opened in 1990 and as a result of this early start is the leading network colocation ecosystem in the UK and Europe. There are estimated to be over 500 networks, carriers and ISP's located across the four Telehouse Docklands buildings.

Telehouse offers LINX PoP's in every building and the campus is easily the busiest LINX site in London. AWS Direct Connect is also now available.

Coriander Avenue, London, E14 2AA

Amito in Telehouse

Amito operates nearly 60 racks in Telehouse with most in the North building, but a number in each of the West and East buildings and since 2016 we have been live in the North Two building as well. Amito has been Telehouse customers since 2004 when we began with our first cabinet, so we are very familiar with the site and how to "get things done" in the Telehouse campus.

Amito Quarter Racks in Telehouse

Details of our quarter racks are as follows:

- **Space:** 10U in a cabinet 600mm wide (standard width) and 1200mm deep
- **Power Delivery:** Dual A+B power supplies. Each power bar has 8 x C13 power sockets
- **Inclusive Power:** We include .5kW, about 2.5Amps as standard but more is possible by arrangement, up to 1kW

Amito part racks in Telehouse

Amito Quarter Rack front view

- **Secure:** The unit is fully lockable. We set up with your own combination code on the lock. Cross-connects are delivered via secure cable trunking to your unit so no risk of interference from other occupiers as are the dual power feeds
- **Access:** Is available 24x7 on an unaccompanied basis for all your personnel who are on your access list (managed by yourselves via the Amito Portal)
- **Onsite Support:** Is available 24x7 and is included as part of your rental fees for any fault related issue. Non fault related support available on a pay-as-you-use-it basis and Amito's team onsite regularly for non-urgent tasks such as installations or larger projects
- **Cross-connect Charges:** Are based on Telehouse's price lists for both installation and recurring fees
- **Half racks:** Two adjacent quarter racks can be provided for larger deployments

Cross-connects

We order all cross-connects as needed by our clients. Amito can offer slightly lower charges for high volume clients using five or more cross-connects.

All cross-connects are listed on the Amito Customer Portal and includes details such as start date, A-end, B-end. Clients can add their own description to each cross-connect once its logged on the system for easier future reference.

Telehouse do not offer a "campus cross-connect" model, thus care must be taken to ensure the best of the four buildings for your needs. The Amito team can help with this.

- Telehouse (North, East, West, North2)
- Interxion (LON1, LON2, LON3)
- Global Switch (North, East)
- DRT (Sovereign House, Sovereign North, Bonnington House, Cloud House)
- Equinix, Slough (LD4, LD5, LD6, LD7, LD10)
- Equinix LD8

Network

The Amito part rack service is available as a colocation service only and clients can make their own network arrangements as they require. However, Amito offers a range of highly competitive network services including Internet ports and data centre interconnects to the other 14 London data centres that we operate in (including Amito's Reading data centre) at 1, 10, 40 and 100Gbs.

Customer Portal

VISION is our unique customer portal that puts you firmly in the driving seat. A comprehensive ERP (enterprise resource planning) system, VISION provides instant visibility and control over your IT estate via a 'single pane of glass'.

You can:

- Arrange access and check access logs
- View bandwidth, power usage and network usage via straightforward graphs
- See details of all your rack locations and cross-connects
- Review performance data
- Book remote hands
